

The Sector:

Retail

The Project:

The installation of new mezzanine floor for kitchen and bathroom displays

The Location:

Hemel Hempstead, Hertfordshire.

The Duration: 4 Weeks

The Works:

The works including the design, supply and installation of split comfort cooling/heating systems. Existing direct gas fire tube heaters were relocated to permit the new floor installation.

The Challenges:

The store remained open throughout the project. This created a number of challenges, firstly, the gas fired tubular heaters had to be relocated. The works had to be undertaken without disruption to the store whilst ensuring the build programme was not compromised. Each tubular heater was in excess of 6 metres in length.

The Result:

Specialist access equipment was utilised to gain access and to support the heaters throughout works. Four gas engineers undertook the works

Condensers located on rear elevation. Protective cages were installed to prevent vandalism and protect against delivery vehicles.
